LATE FOREIGN DEVELOPMENTS

ARGENTINA: The weather during May was reported generally favorable for plowing and seeding. Timely rainfall provided good early wheat growth and facilitated field work for flaxseed and barley, as well as improving pastures. Some areas, however, are again in need of rain, and field work is likely to be delayed in parts of the south if not relieved soon. Unofficial forecasts of probable wheat acreage have been raised progressively.

- - - - -

UNITED STATES: Canada's allotment of wheat imports for the new quota year, which began May 29, 1943, has been filled, according to an announcement by the Bureau of Customs, dated June 3. The quota of 795,000 bushels of Canadian wheat (other than wheat unfit for human consumption) that may be entered for consumption, or withdrawn from warehouse for consumption, during the 12-month period is exclusive of any purchases made by the War Food Administrator or his designee. See Foreign Crops and Markets, May 3, 1943.

- - - - -

ARGENTINA: A Government decree of June 1, 1943, prohibits exports of rapeseed, cottonseed, peanuts, and corresponding oils. All shipments of sunflower seed and oil were stopped on May 6; an order of that date revoked an earlier decree that permitted the fulfillment of contracts made prior to February 10, 1943.

June 7, 1943

G R A I N SNEAR EAST CROP PROSPECTS  
FOR 1943 FAVORABLE . . .

Crop prospects for Near East countries (Iraq, Iran, Syria and Lebanon, Palestine, and Trans-Jordan) are indicated to be generally good, according to information received in the Office of Foreign Agricultural Relations. The wheat and barley harvest now in progress in these countries is said to be about the same as, or slightly above, that of 1942.

Iraq

Prospects for the 1943 wheat crop in Iraq appear to be more favorable than those of last year. The crop is forecast at around 16,500,000 bushels, compared with 14,700,000 bushels estimated for 1942. Large seedings for the current harvest were voluntary on the part of farmers, since the prevailing high prices were a strong incentive. The weather is reported to have been favorable for the development of the crop, which now appears in promising condition.

Reports indicate that relief from the serious food problem in Iraq depends not only on a good harvest but also on stringent control of supplies. Despite last year's fair crop, food scarcity became increasingly serious as the season advanced. Though the indicated supply should have been adequate even with increased domestic demands, as a result of poor distribution, widespread hoarding and of smuggling, supplies reaching the market were very scanty and prices correspondingly high.

Not only was the demand in Iraq strong, but neighboring countries where actual shortages existed were offering even higher prices than those in Iraq's black market. Though no official exports were permitted during the year, some wheat is known to have moved across the border from Iraq to Iran, Turkey, and Syria. The bread in Iraq deteriorated greatly, and in September 1942 was described as being of extremely low quality, with a large proportion of foreign material as well as coarse grains incorporated with the wheat.

The Government's fixed price for high quality wheat is 25 Iraqi dinars per ton (\$2.74 per bushel), but the black market price during the second half of 1942 rose from 40 Iraqi dinars per ton (\$4.39 per bushel) to 60 dinars (\$6.59 per bushel).

Iran

The wheat shortage continues to be an outstanding problem in Iran. Though not officially confirmed, forecasts indicated that the 1943 crop would be about the same as that of the two preceding years. The 1942

- - - - -

crop, which was earlier estimated at 51,000,000 bushels, is now placed at from 40,000,000 to 44,000,000 bushels, or very little change from the estimated small crop in 1941. It is stated by Iranian Government officials that there has been a marked tendency on the part of provincial heads of the Ministry of Agriculture to exaggerate production data in past years. The current estimates have been adjusted to conform to new information.

Another factor effecting reduction in grain production was a considerable population shift reported as a result of local food shortages in many villages. The wartime boom in building and construction work is also said to have influenced the trend away from the rural settlements.

Actual shortages were accentuated by hoarding of available grain. The domestic trade in wheat and barley is now a monopoly of the Ministry of Food, and, regulations set up by that agency designate possession of more than 1.5 kilograms (3.3 pounds) of flour per person per day as hoarding. The serious bread shortage is especially bad in Teheran where under the present rationing system workmen's daily rations are set at 800 grams of bread, and other persons are allowed only 400 grams daily. Stocks of wheat were said to be extremely small in all parts of the country and especially short in Teheran, where supplies were estimated to be only about 750 metric tons or about a 3-day supply.

Barley production in 1942 is now estimated at 23,100,000 bushels or slightly below the 1941 crop of 25,700,000 bushels. The bulk of the barley crop is normally used for feed, but, with the wheat supply so low, larger quantities than usual were reported to have been used in admixture with wheat, though barley stocks were also low.

#### Syria and Lebanon

Seedings of wheat and barley for the harvest beginning in June 1943 in Syria and Lebanon are reported to be about 30 percent above those for 1942. On the basis of the good crop prospects in March, it was indicated that if growing conditions continued favorable, the current crop might be expected to exceed considerably that of last year. Wheat production in 1942 is now placed at 17,200,000 bushels and barley at 9,300,000 bushels.

Hoarding of wheat during the past season created artificial shortages, which necessitated using a larger proportion than usual of barley to supplement wheat. As bread is the principal foodstuff of a large part of the population, great hardship was reported as a result of the poor grain collections. The monthly grain allowance was reduced from 10 kilograms (22 pounds) per month to 9 kilograms (19.8 pounds), which was composed of two parts of barley to one part of wheat.

June 7, 1943

With bread such an important part of the diet, the reduced allowance was not adequate, and those who could afford to resort to the black market were reported to be doing so. Bread at this source was, however, quoted at 150 Syrian piasters per kilogram, or the equivalent of 31 cents per pound at the official rate of exchange, making it beyond the reach of the majority of the population.

### Palestine

Prospects for the 1943 wheat crop in Palestine were reported above average in mid-April. The crop was unofficially forecast at a minimum of 3,700,000 bushels, assuming average weather until harvesttime. This is above average and compares with the near-record harvest of 4,100,000 bushels last year. Crop conditions vary considerably as the result of excessive rains during March. Condition is reported as excellent on tractor-cultivated slopes where drainage is good, medium on shallow-cultivated slopes, and poor on the plains. The crop in the Beersheba district, however, is said to be a total failure.

Barley is now forecast at about 2,500,000 bushels compared with earlier expectations of about 4,500,000 bushels. The acreage is estimated to be about the same as that of 1942, reported at 525,000 acres. Failure of the crop in the chief barley-producing district of Beersheba accounts for the reduction.

### Trans-Jordan

The 1943 wheat crop in Trans-Jordan was tentatively forecast at about 3,700,000 bushels, or slightly below the 1942 production of 4,200,000 bushels, which was well above average. The 1942 crop was estimated to be above the country's requirements, and shipments of about 1,800,000 bushels to Palestine was planned. Actual movement to Palestine, however, was reported at only about 200,000 bushels, with lack of transportation given as the limiting factor. On the other hand, reports indicate that considerable quantities were shipped to Syria, where the official price was much above that quoted in Palestine and black-market prices, correspondingly high. Restrictions were placed on wheat movement in Trans-Jordan whereby exports were permitted only to Palestine, but these regulations did not prove effective, since illegal transactions made control difficult.

An unofficial forecast placed the barley crop at about 1,800,000 bushels, compared with 2,300,000 bushels for 1942. The above-average crop of last year was the result of unusually favorable weather, as the acreage was considerably less than that of any other recent year. The area sown to barley, this year, is placed at the same figure as that of last year, 100,000 acres.

C O T T O N - O T H E R F I B E R SBRAZILIAN COTTON PRODUCTION  
SHOWS SLIGHT INCREASE . . .

Early estimates indicate that the 1942-43 cotton crop in Brazil may be slightly in excess of 2,000,000 bales, compared with the 1,844,200 bales produced in 1941-42. Production in Northern Brazil is estimated at 363,200 bales for the crop picked late in 1942. Picking is now in progress in Southern Brazil. Early trade estimates of 1,614,200 bales for the crop in São Paulo indicate a total of close to 1,700,000 for the entire southern area, and more than 2,000,000 bales for the 1942-43 crop in all Brazil. A recently announced final estimate of 1,375,700 bales produced in 1941-42 in Southern Brazil brings the total Brazilian crop of that year to 1,844,200 bales, or nearly 26 percent below the unusually large crop of 1940-41.

L I V E S T O C K   A N D   A N I M A L   P R O D U C T SARGENTINE MEAT SUPPLIES AND EXPORTABLE  
SURPLUS SMALLER IN 1943 . . .

Latest reports confirm earlier advices to the effect that Argentine meat supplies in 1943 will be smaller than in 1941 and 1942. Indications are that the 1943 production of meat will amount only to 5,290 million pounds, a reduction of 8 percent compared with the 1942 record war production. At that figure, however, production would still be about 9 percent above the pre-war average. The decrease in 1943 is confined to beef and mutton. Pork production is expected to be materially larger owing to an important expansion in the hog industry.

a/ Obtained by multiplying total slaughter by average dressed weight at packing plants. b/ Excludes farm production of pork, for which no estimate is available. c/ Preliminary. d/ Forecast based on report of May 13, 1943. e/ Forecast based on information contained in cablegram dated March 1, 1943.

The entire exportable surplus of meat is to be acquired by the United Nations, although details of the new purchase plan have not yet been announced. In normal years about 30 percent of total supplies is exported. Last year the British Ministry of Food contracted for the bulk of the Argentine frozen- and chilled-beef exports, while the United States took a substantial quantity of canned beef to fill Army contracts. Even in normal years the United Kingdom was always the most important purchaser of Argentine meat, taking approximately 80 percent of the surplus. The British market has had to depend on the Argentine even more than usual since the

outbreak of the war, because much of the meat from other customary sources of supply, such as Australia and New Zealand, has had to be reserved for the use of the armed forces in the Middle East and for the increasing needs of the Allied forces in the Pacific area.

The anticipated reduction in meat supplies this year is attributed mainly to the heavy slaughter of cattle in 1941 and 1942, which cut into reserves, and to the severe drought of late 1942 and early 1943. As a result, slaughter supplies in 1943 will be smaller and average dressed weights lighter. Preliminary estimates for 1943, based primarily on expected packing-house slaughter, indicates a reduction of approximately 13 percent in total beef production. The quantity of beef available for export, according to present indications, will be 1,268 million pounds, converted to a fresh or bone-in basis, a reduction of 22.5 percent compared with 1942. Exports in 1941 and 1942 were the largest in years, reaching 1,718 million pounds in 1941 and 1,636 million in 1942. Beef exports for the 5-year period 1934-1938 averaged 1,315 million pounds.

Official sources. Method of converting to fresh or bone-in equivalent: Frozen and chilled boneless calculated on 74-percent yield, January - October, and 80-percent yield beginning November 1941. Difference in yield is due to nonremoval of blade bone after November 1941. Canned meat - 1 unit is equivalent to 2.5 units of fresh beef.

a/ Includes, besides jerked beef, small quantities of salt beef and pork. b/ May include small quantity of mutton. c/ Includes de-boned and bone-in (actual weight shipped). d/ Frozen and canned reported only on fresh or bone-in basis. e/ Not available. f/ Exportable surplus stated to be from 20 to 25 percent below 1942 in report dated May 13, 1943.

June 7, 1943

Foreign Crops and Markets

581

Owing to the lack of agreement on prices, the Argentine Meat Board prohibited exports of canned meats pending settlement of the price question in the 1943 meat contract with Great Britain, and stocks accumulated as larger amounts were packed than were shipped. This prohibition of exports has recently been lifted and some canned meat is now permitted to be shipped on the basis of a 10-percent increase in price. Meanwhile, total exports of beef in the first 4 months of 1943 amounted to 360 million pounds or 35 percent below those of a year ago.

Wartime demands and high prices for export beef resulted in a considerably larger than normal proportion of production entering export channels in 1941 and 1942. This development jeopardized supplies for the home market. The Argentine Government took measures recently to protect the interests of domestic consumers by giving the Argentine Meat Board virtual control of the domestic market, a primary objective being to make increased supplies available to consumers in the lower income groups. A portion of the recently increased ad valorem tax on marketings (formerly 1 percent but now 1.5 percent) is to be used to provide beef for domestic consumers at a comparatively low cost.

Cattle marketings in the first 4 months of 1943 amounted to 1,374,000 head, according to preliminary figures, a reduction of 2 percent compared with the corresponding period of 1942. Drought liquidations apparently reached a peak in February when the drought was at its maximum. Because pastures were so badly depleted, cattle began to move to market in larger numbers early in the year and at weights averaging from 15 to 20 kilograms (33 to 44 pounds) below those of a year ago. Receipts at Liniers, however, and direct purchases on ranches by freezing companies declined to 279,837 head in April, at which point they were 10.6 percent lower than in April 1942 and far below the 444,456 head marketed in April 1941. This indicated that the peak of the liquidation had passed and that for the next several months marketings may show a substantial reduction compared with a year ago.

Reserve slaughter supplies were exhausted by heavy slaughterings in 1941 and 1942. The eagerness of cattlemen to take advantage of prevailing high prices for beef caused them to cut deeply into their reserve stocks, and markets are now entirely dependent upon current supplies.

In contrast to the downward trend in beef and veal production in Argentina, the output of mutton and lamb, and especially of pork, has increased. The increase, however, has not been sufficient to offset the reduction in beef. A decrease of 10 percent to 450 million pounds is expected in mutton and lamb production in 1943, but that figure is still 41 percent above the pre-war average. Pork production has increased substantially and is expected to reach 740 million pounds in 1943, an increase of 44 percent compared with 1942, and more than three times the average for the years 1934-1938.

The proportion of mutton and lamb and of pork entering international trade channels, as indicated by production in packing plants, has increased materially in recent years. Packing-house production of mutton and lamb represented 66 percent of the total in 1942, against only 60 percent in the years 1934-1938. In the case of pork, such production reached 64 percent of the total in 1942 against only 47 percent in 1939. Domestic consumption of pork has been increasing.

## GENERAL AND MISCELLANEOUS

## FOREIGN EXCHANGE . . .

EXCHANGE RATES: Average value in New York of Chinese, Japanese, and some European currencies during last full months for which rates were available, and current official rates

Country	Unit	New York rates <u>a/</u>	Current official rates
		<u>Month</u>	<u>Cents</u>
Belgium	Belga	April 1940	<u>b/</u> 16.00
Denmark	Krone	March 1940	20.88
France	Franc	May 1940	<u>c/</u> 2.00
Germany	Reichsmark	May 1941	<u>d/</u> 40.00
Greece	Drachma	September 1940	<u>d/</u> 0.67
Italy	Lira	May 1941	<u>d/</u> 5.26
Netherlands	Guilder	April 1940	53.08
Norway	Krone	March 1940	22.86
Portugal	Escudo	May 1941	<u>e/</u> 6.67
Spain	Peseta	May 1941	<u>d/</u> 9.13
Sweden	Krona	May 1941	23.81
Switzerland	Franc	May 1941	23.20
China	Yuan (Shanghai)	June 1941	<u>d/</u> <u>f/</u> 5.31
Japan	Yen	June 1941	23.44

a/ Noon buying rates for cable transfers as reported by Federal Reserve Board. Last daily rate reported on April 8, 1940, for the Danish and Norwegian kroner; on May 9, 1940, for the belga and guilder; on June 15, 1940, for the French franc; on October 25, 1940, for the drachma; on June 14, 1941, for the other above-mentioned European currencies; and on July 26, 1941, for the yen and yuan (Shanghai).

b/ Based on German official rate for United States dollar.

c/ Based on German official rate for United States dollar in occupied area; in unoccupied area, official rate is 2.28 cents.

d/ Quotations nominal.

e/ Rate for currency; for checks, 4.09 cents to the escudo.

f/ Rate set August 18, 1941, by Chinese Stabilization Board.

Federal Reserve Board.

a/ Noon buying rates for cable transfers.

b/ Official, regular exports. The special export rate of 23.70 cents, reported beginning March 27, 1941, applies to exchange derived from certain minor exports (e.g. dairy products) to certain countries (e.g. United States), such exchange formerly having been sold in the free market. Quotations nominal.

c/ Free prior to February 2, 1943. Quotation of free rate discontinued after February 1, 1943, when regulations were issued by the British Treasury transforming all free sterling balances into registered sterling, convertible into dollars at official rate.

d/ Free. Under law of October 6, 1942, the cruzeiro became the unit of currency, replacing the milreis. The cruzeiro has the same value as the milreis. Since April 10, 1939, 30 percent of the exchange derived from exports must be turned over at the official buying rate of 6.06 cents, the weighted average value of the milreis being 5.42 cents in 1942, the value of the cruzeiro 5.41 cents in May 1943, and 5.41 cents in the week ended May 29, 1943. Quotations nominal.

e/ Free. Most transactions between Canada and the United States take place at the official buying and selling rates.

f/ Prior to October 22, 1941, quotations nominal.

g/ Noncontrolled. Quotations nominal.

GENERAL NOTE -- The term, foreign trade, is applied to trade between the United States (including noncontiguous territories) and foreign countries. Trade between continental United States and noncontiguous territories is referred to as shipments. The Philippine Islands and, prior to January 1, 1935, the Virgin Islands are included with foreign countries. Alaska, Hawaii, Puerto Rico, and, since January 1, 1935, the Virgin Islands are noncontiguous territories.

In the classification of agricultural imports into supplementary and complementary groups, all those similar to agricultural commodities produced commercially in the United States and all others that are interchangeable in use to any significant extent with such United States commodities are considered supplementary. Complementary include all others, about 95 percent of which consist of rubber, coffee, raw silk, cacao beans, wool for carpets, bananas, tea, and spices.

All figures in this publication are compiled from publications and official records of the Bureau of Foreign and Domestic Commerce, Bureau of the Census, and of the United States Tariff Commission.

Until further notice, no analysis of United States foreign trade in agricultural products will accompany tables published in the foreign trade supplement of Foreign Crops and Markets.

SUMMARY TABLE: Value of foreign trade in agricultural products,  
1914-1942

Year ended December 31	Domestic agricultural exports	Supplementary agricultural imports <sup>a/</sup>	Supplementary imports as percentage of agricultural exports
